- **Time-management:** Able to prioritize tasks, meet deadlines, and maintain productivity under pressure.

Projects

• Accommodation Management (2025)

- **Github:** https://github.com/DucKhai84/DoAn_LTWeb.git
- **Position:** Developed backend business logic and implemented user account security.
- **Main Function:**
 - User registration, login, password reset, and role management
 - Admin management of appointments, users, vehicles, rentals, and contracts
 - Booking notifications sent to admin
 - Admin posts announcements to tenants.
 - Export room invoices as PDFs with payment info and QR codes.
- **Technicals:**
 - C# (ASP.NET Core MVC), SQL Server, Rest API, Github, Postman, Docker.

- **Management Courses - E-Learning (2025) [In Process]**
 - **GitHub:** github.com/DucKhai84/NodeJS-Courses-Management
 - **Position:** Backend Developer
 - **Responsibilities:**
 - Designed and implemented backend business logic for the system.
 - Developed RESTful APIs for user and admin functionalities.
 - Integrated PostgreSQL using Sequelize ORM following the MVC pattern.
 - **Implemented Features (Backend):**
 - User registration, login, password reset, and role-based access control.
 - Admin management of courses, chapters, and lessons.
 - **Planned / In Progress:**
 - Lesson notes with video timestamps.
 - Course comment system.
 - Authentication enhancement with cookies and refresh tokens.
 - **Technologies:**
 - Node.js, JavaScript, PostgreSQL, Sequelize, REST API, MVC Architecture, ReactJS (Vite), Cloudinary.
-

- **School Management Ecosystem - Mobile App [In Process] (2025)**
- **GitHub:** Private repository (available upon request)
- **Team:** OmniMer Team
- **Position:** Backend & Developer
 - **Responsibilities:**
 - Developed CI/CD pipelines and workflows; managed VPS server responsibilities.
 - Developed RESTful APIs for user and admin functionalities.
- **Implemented Features (Backend):**
 - User registration, login, password reset, and role-based access control.
 - Admin management of courses, chapters, and lessons.
- **Planned / In Progress:**
 - Building backend to retrieve VPS parameters such as CPU, RAM, storage, and error logs.
 - Developing a dashboard website for super admin management.
 - Completing tuition calculation functionality.
- **Technologies:**
 - Node.js, Flutter, TypeScript, MongoDB Atlas, Firebase Authentication, REST API, MVC Architecture, Next.js (Turbopack), Tailwind CSS
